- Are credit cards processed securely?
- Do you store my customers credit card numbers?
- Where does my money go when my customer orders online through Event Console?
- Does Event Console only provide online registration?

Are credit cards processed securely?

Yes, Event Console provides secure, 128 BIT Verisign Encryption for every credit card processed.

Do you store my customers credit card numbers?

No, Event Console does not store credit card numbers for security reasons. Your customers can utilize their EEPro account by saving their billing and shipping addresses but will need to enter their credit card information each time they make a purchase.

Where does my money go when my customer orders online through Event Console?

Event Console integrates with your Authorize.net or Paypal Website Payments Pro account. They authorize the payment through Event Console and pass the funds to your checking account. Event Express Pro does not handle any funds collected by your customers orders.

Does Event Console only provide online registration?

No, Event Console also provide event management functions such as staff, seating, and competition management. It also provides you with the ability to add your paper registrations creating once source for all your registration data. Web based reporting and data exports are available as well.
